What is metered gas?

Metered gas is the easy, convenient and modern solution for your energy needs. It provides a continuous supply of liquid petroleum gas (LPG) through a network of underground pipes without the need to order and store LPG cylinders.

Metered gas provides an energy option that produces fewer greenhouse gas emissions than coal fired electricity and because it's measured by a meter you only pay for what you use.

Your new home can now be connected to metered gas. Talk to your builder about how you can enjoy the benefits today.
